

Project2-Customer_service_request_Analysis

October 26, 2022

1 Customer Service Request Analysis

1.1 DESCRIPTION

You've been asked to perform data analysis of service request (311) calls from New York City. You've also been asked to utilize data wrangling techniques to understand the pattern in the data and visualize the major types of complaints.

1.1.1 Perform the following steps:

1. Understand the dataset:
 - Identify the shape of the dataset
 - Identify variables with null values
2. Perform basic data exploratory analysis:
 - Utilize missing value treatment
 - Analyze the date column and remove the entries if it has an incorrect timeline
 - Draw a frequency plot for city-wise complaints
 - Draw scatter and hexbin plots for complaint concentration across Brooklyn
3. Find major types of complaints:
 - Plot a bar graph of count vs. complaint types
 - Find the top 10 types of complaints
 - Display the types of complaints in each city in a separate dataset
4. Visualize the major types of complaints in each city
5. Check if the average response time across various types of complaints
6. Identify significant variables by performing a statistical analysis using p-values and chi-square values (Optional)

```
[1]: # Importing the required libraries
import pandas as pd
import numpy as np
```

```
import matplotlib.pyplot as plt
```

1.1.2 Read the Dataset

```
[2]: data= pd.read_csv("311_Service_Requests_from_2010_to_Present.csv", low_memory=
    ↪False,parse_dates=['Created Date', 'Closed Date', 'Resolution Action Updated',
    ↪Date'],index_col='Unique Key')
data.head()
## date columns are parsed to change the object type as dates to further
    ↪perform response time dates calculation
```

```
[2]:
```

[5 rows x 52 columns]

1.1.3 1. Understand the Dataset

Identify the shape of the data set

```
[3]: #Shape of the data set
data.shape
```

```
[3]: (364558, 52)
```

Identify the variables with null values

```
[4]: #Variables with null values
data.isna().sum()
```

```
